Problem-Solution Fit

Date	01 October 2026
Team ID	SWTID-2026-3953
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to show how the **Implement Client Script & UI Policy (Incident)** solution addresses the needs, problems, behaviors, limitations, and root causes of ServiceNow users creating and managing incident records.

1. CUSTOMER SEGMENT(S) [CS]

- ServiceNow incident management users
- ServiceNow incident management users

IT support team members

- ServiceNow incident management users

Incident managers and administrators

5. AVAILABLE SOLUTIONS – PROS & CONS [AS]

- Manual validation: Easy to perform but time-consuming.
- Client Scripts: Validate fields and display messages dynamically but require scripting knowledge.
- UI Policies: Control field visibility, mandatory status, and read-only behavior based on conditions.

8. CHANNELS OF BEHAVIOR [CH]

Online:

- ServiceNow web interface.
- Incident forms.
- Incident lists and dashboards.

Offline:

- Collecting incident details from users.
- Preparing incident information before entering it into ServiceNow.

2. PROBLEMS / PAINS + ITS FREQUENCY [PRI]

- Missing or incomplete incident details.
- Incorrect incident priority selection.
- Repeated corrections due to invalid information.
- Delays in incident processing.

6. CUSTOMER LIMITATIONS [CL]

- Limited knowledge of ServiceNow configurations.
- Time constraints when creating incidents.
- Risk of incomplete or incorrect data.
- Need for a simple and user-friendly incident form.

9. PROBLEM ROOT / CAUSE [RC]

- Incident fields lack proper validation.
- Mandatory fields are not configured correctly.
- Field visibility and read-only conditions are missing.
- Users enter inconsistent or incorrect incident information.

3. TRIGGERS TO ACT [TR]

- A new incident needs to be created.
- Existing incident details need updating.
- Mandatory information is missing.
- Incident category, impact, or urgency changes

7. BEHAVIOR [BE

- Users create and update incident records.
- Users enter incident description, category, impact, and urgency.
- Users correct errors before submitting the form.
- Support teams review and resolve incidents.

10. SOLUTION [SL]

Implement Client Scripts to validate incident fields and display error messages.
Configure UI Policies to make fields mandatory, visible, or read-only based on conditions.
Validate required information before submission.
Improve incident data accuracy and consistency.

4. EMOTIONS BEFORE / AFTER [EM]

- **Before:** Users feel confused when filling out incident forms and worried about errors.
- **After:** Users feel confident entering accurate information with automatic validation and clear instructions.
